<https://v01d.dev>

Professional Summary

Software Engineer with hands-on experience designing and deploying cloud-native, AI-driven systems within the Microsoft Azure ecosystem. Strong background in backend development, distributed systems, and applied AI using modern frameworks such as LangChain and Azure Semantic Kernel. Proven ability to build scalable APIs, event-driven architectures, and high-performance automation around AI outputs.

Experience

AI & Software Engineer – Emerging Technologies Department

Applab.qa, Doha, Qatar

Feb 2025 – Present

- Designed and deployed production-grade Azure-based video and audio processing pipelines using Blob Storage, Cosmos DB, Queue Storage, and Azure Cognitive Services.
- Built scalable, event-driven backend services using Azure Container Apps, Docker, and asynchronous Python frameworks (FastAPI, Quart).
- Implemented robust retry, monitoring, and fault-tolerance mechanisms across distributed cloud services.
- Developed APIs and backend workflows for AI-driven transcription, translation, and media processing.
- Worked extensively with Azure Functions, App Service, API Management (APIM), and Azure Semantic Kernel.
- Collaborated closely with AI and R&D teams to automate workflows and accelerate experimentation.
- AJ WASAF: AI-driven video editing and multilingual translation platform leveraging Azure AI services and cloud-native media pipelines.
- National Planning Committee (NPC) Hackathon: Developed an AI chatbot using Azure Semantic Kernel, enabling contextual reasoning and intelligent orchestration of AI workflows.
- General Authority of Customs (GAC): Built an enterprise AI chatbot using Azure AI Search with vector search for semantic document retrieval and question answering.
- Invest Qatar: Implemented high-performance backend logic that enables AI-generated structured JSON output to be programmatically transformed into DOCX documents. Optimized parsing and document generation pipelines for speed and production reliability.

Technical Skills

Programming Languages

- Python, Go (Golang), C (Linux)

Cloud & Infrastructure

- Microsoft Azure: Container Apps, Function Apps, App Service, API Management, Blob Storage, Cosmos DB, Queue Storage
- Azure AI: Cognitive Services (Speech & NLP), Azure Semantic Kernel
- Docker, Linux (Debian, Arch), VPS Hosting

Databases & Data

- Cosmos DB, MongoDB, Azure Blob Storage

AI & and frameworks

- LangChain, Azure OpenAI integrations, Semantic Kernel

Projects

- Cloud-Based Media Processing Pipelines: Event-driven services for video transcription, translation, and AI-based analysis.
- CLI Applications: Cross-platform automation tools for file system operations and workflow orchestration.
- Web Scrapers & Automation: Python-based scraping and automation systems using BeautifulSoup and Selenium.
- Interactive Web Applications: Backend APIs and tools for document and media processing.

Education & Training

- IGCSE and A-Levels (Physics, Mathematics, Computer Science)
- SAT Score: 1290
- Getting Started with Go – University of California, Irvine (Coursera)
- Functions, Methods, and Interfaces in Go – University of California, Irvine (Coursera)
- Python and Ethical Hacking Training

Volunteering

- TEDxYouth@NIA – Volunteer & Photographer (2018, 2019)
- Model United Nations – Press Team & Head of Press (2018, 2022)
- Showdown Gaming Tournament – Volunteer & Photographer (2022)
